

## Our Route in May: Istanbul and Moscow

This May, we're taking Sensei to two of the most important trade fairs on the 2026 international calendar.

First up is **Automechanika Istanbul**, where we'll be at Hall 8, Stand A235 from May 19–22. This is a particularly exciting event for us, as we'll be officially launching our **Common rail injectors, spare parts and test benches** compatible with **CAT, Bosch, Denso** and **Delphi** systems. Visitors will have the opportunity to see the test benches in operation through live demonstrations at our stand, offering a close-up experience of both the injectors' and test benches' performance and capabilities.

Then, just a week later, we head to Moscow for **CTT Expo** from May 26–29, where you'll find us at Hall 8, Stand 620. We're thrilled to be bringing Sensei to such a prestigious international platform and look forward to introducing the brand to an even wider global audience.

Whether you're joining us in Istanbul or Moscow, we'd love to see you at our stand.

## Our Website is Now Available in More Languages

The Sensei website now delivers an even more inclusive and user-friendly experience by offering support in three additional languages.

Users can now navigate the platform in Spanish, Italian, and Russian, making it easier for a broader audience to engage with our services.

This update reflects our growing international presence and our commitment to meeting the needs of an increasingly diverse customer base. By breaking down language barriers, we aim to provide a smoother, more accessible experience for users around the world while continuing to expand our global community.
